

ASSIGNMENT 1

Design and Develop a Responsive Single Page Web Application

Student Name	PRINCE BANSAL
PRN	202401100064
Branch	Software Engineering
Division	SE-A3
Batch	A3
Roll No.	63

Aim

To design and develop a responsive single-page web application for Labour Connect using HTML5, CSS3 and Bootstrap framework.

Objectives

- To design a single-page web application using HTML5.
- To apply custom styling using CSS3.
- To use Bootstrap framework for designing the webpage.
- To demonstrate the Bootstrap grid system and components.
- To design a responsive webpage for desktop, tablet and mobile screens.
- To create a simple and user-friendly interface for the Labour Connect application.

Theory

1. HTML5

HTML5 is used to create the basic structure of a web page. It provides different elements such as header, navigation, sections, forms and footer.

In this practical, HTML5 is used to create the different sections of the Labour Connect single-page website.

2. CSS3

CSS3 is used to add styling and improve the appearance of the webpage. It is used for colors, spacing, fonts, backgrounds, cards, buttons and responsive styling.

In this practical, an external CSS file is used for the custom design of the Labour Connect webpage.

3. Bootstrap

Bootstrap is a frontend framework used to create responsive and attractive web pages. It provides predefined classes and components which reduce the amount of custom CSS required.

Bootstrap features used in this practical include:

- Responsive Navbar
- Grid System
- Cards
- Buttons
- Carousel
- Responsive utilities

The Bootstrap grid system is used to arrange content properly on different screen sizes.

4. Responsive Web Design

Responsive web design means that a website can adjust its layout according to the screen size of the device.

The Labour Connect webpage is designed to work on:

- Desktop
- Tablet
- Mobile

Bootstrap responsive classes and CSS media queries are used to achieve the responsive layout.

Application Used

The application developed for this practical is based on Labour Connect: A Digital Platform for Skilled Employment and On-Demand Local Services.

The webpage provides information about the two main parts of Labour Connect:

1. Employment Connect – connects skilled workers with employers and businesses.
2. On-Demand Service Connect – helps customers find local service providers such as plumbers, electricians, carpenters and mechanics.

Software and Hardware Requirements

Software

- Visual Studio Code
- HTML5
- CSS3
- Bootstrap 5
- Web Browser such as Google Chrome or Microsoft Edge
- GitHub for storing the source code

Hardware

- Laptop
- Minimum 4 GB RAM
- Keyboard and Mouse
- Internet connection

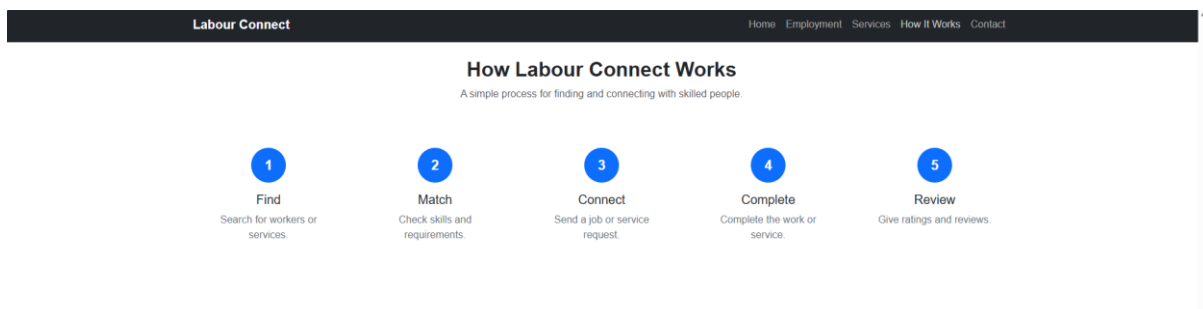

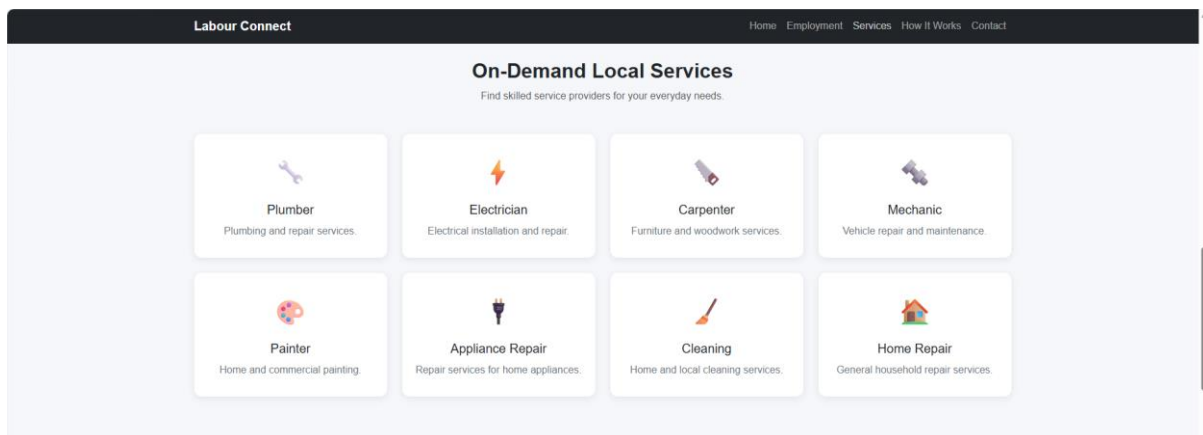

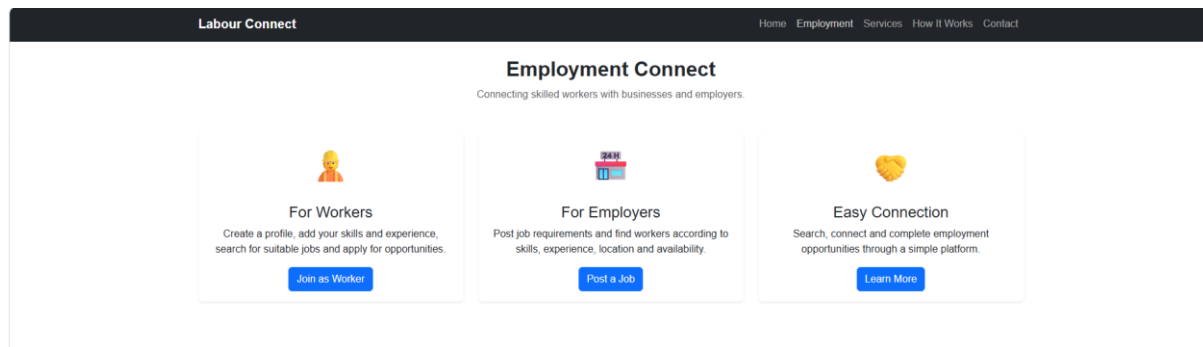

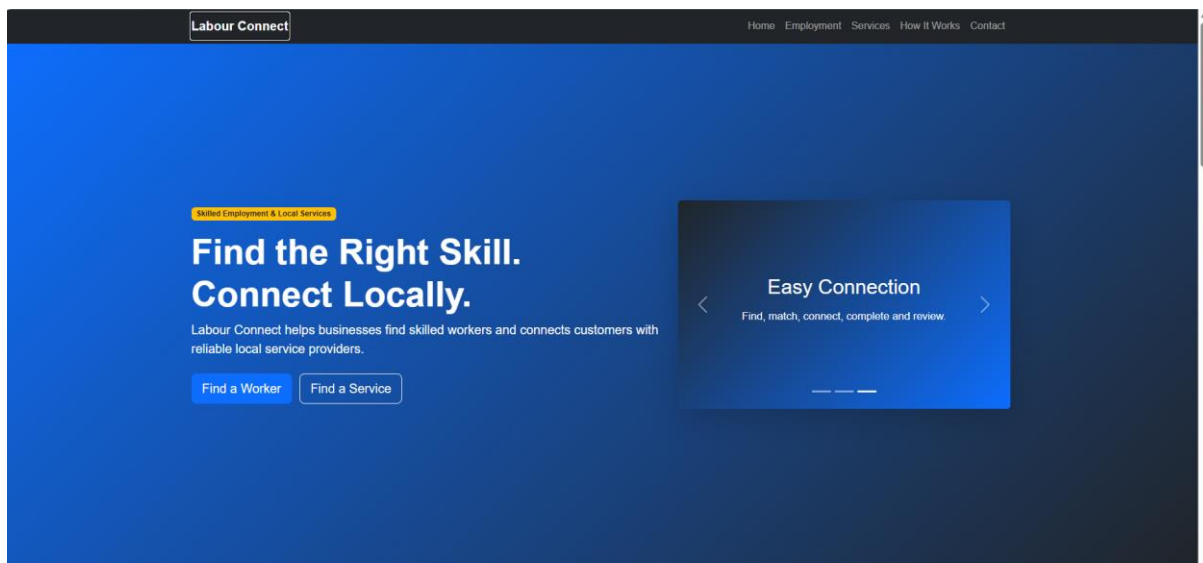

Code

The practical files were uploaded to a GitHub repository so that the source code can be accessed online.

GitHub Repository:

[Web-Technology-Practicals/Practical-1 at main · Prince376pb/Web-Technology-Practicals](https://github.com/Prince376pb/Web-Technology-Practicals)

Output:

Connect With Labour Connect

Looking for a worker or a local service provider?
